

# AGRU SmartFit Pipe Clip 049.8

## Advantages & features:

- Maximal operational safety due to low-stress support
- Long-lasting pipe integrity due to minimal friction
- Versatile options for floor and ceiling installation
- Controlled directional guidance of the pipeline during thermal expansion
- Maximum flexibility during installation

[Product Catalogue SmartFit Pipe Clip 049.8](#)

This lightweight pipe clip is specifically designed for plastic piping systems with larger diameters. With its innovative design and its high weather resistance, this pipe clip is the ideal solution for all plastic piping systems that demand the highest operational safety and longevity.

### Low-stress support

The radial flexibility of the pipe in the clip allows for low-stress longitudinal and diameter changes under varying temperature and pressure conditions. During these expansion movements, the high quality composite plastic material of the clip prevents surface wear on the pipe.

### Ideal installation

The symmetrically mirrored pipe clip halves enable perfect floor and ceiling installation and, in combination with a fixed point, expansion bends can be designed in accordance with the relevant guidelines. Thanks to the 360° axial rotation capability of the clip, the pipeline can be easily adjusted to changes in direction and therefore offers maximum flexibility during installation.
