

Improved marking of chamfered stub flanges PP & PP-PURE and PVDF & PVDF-UHP

To meet the continuously growing requirements for high purity piping systems, AGRU is constantly upgrading and expanding its PURAD and AGRUCHEM industrial piping systems product range. The latest improvement is an additional marking of the PP & PP-Pure and PVDF & PVDF-UHP chamfered stub flanges with a continuous groove all around. Because of the marked groove around the circumference, it can easily be visual checked in already installed piping systems if a chamfered stub flange is installed next to the butterfly valve.

Advantage:

- easy visual inspection if a chamfered stub flange was installed for the butterfly valve connection
- no incorrect installation
- no mix up of stub flanges and chamfered stub flanges
- This gives more safety for the correct installation

- Chamfered stub flange
- for butterfly valves
- injection moulded
- PP & PP-Pure, PVDF & PVDF-UHP
- Butt + IR-welding

Code: 012.7; 012.8; 012.9
